

Bonding Foldable

Fold your paper “hot dog” style, and cut three equal length tabs on one side.

Label the tabs with the three bond types:

- 1) Ionic,
- 2) Covalent, &
- 3) Metallic

On each tab describe the following for each bond type:

- Types of elements involved. (Metals, nonmetals, etc.)
- What happens to the electrons in the bonds? (Shared or transferred?)
- 3 examples of each type of bond with pictures.

Attach the completed foldable to the next empty page in your spiral.
