

Methods of Heat Transfer

Name _____ Date _____ Block _____

In each of the following situations, identify the method of heat transfer taking place (conduction, convection, radiation). *(It is possible that more than one process may be occurring.)*

1. Hot coffee is stirred with a spoon. The spoon gets hot due to _____.
2. A chair is placed several feet from a fire in a fireplace. The fireplace has a glass screen. The side of the chair facing the fireplace gets warm because of _____.
3. A certain type of decorative lamp contains colored liquids. These liquids form globbs that break off and rise to the top of the liquid. The globbs rise due to _____.
4. Near the ceiling of a room the air is warmer. The warm air rises because of _____.
5. A college student holds the back of his hand near an iron to see if it is hot. Heat is transferred to his hand by _____.
6. A heater is placed under one corner of a water bed mattress. Warm water moves throughout the mattress because of _____.
7. A certain type of stainless steel cookware has a layer of copper applied to the bottom to help it heat evenly. The copper transfers heat to the pan by _____.
8. In a swimming pool, the water near the surface is slightly warmer. The warm water rises because of _____.
9. One end of a copper rod is placed in a flame of a Bunsen burner. Small pieces of wax placed along the rod melt at progressively larger distance from the flame. Heat is transferred through the rod by _____.
10. A house burns down. On the house across the street, all of the vinyl siding is twisted and warped by the heat. The heat was transferred across the street by _____.

Identify the method of heat transfer that takes place in each illustration. Some illustrations may show more than one form of heat transfer.
